

The prime triplet as a three-member instance of the two-centre CRT mechanism (Paper X, extended)

Prime triplet ($6N-1, 6N+1, 6N+5$): non-monotone ω -shape, peak at $\omega = 3$ (S10)

Residuals $\leq 2.4\%$ for $\omega \leq 6$;
 $\omega = 7$ (11 triplets) small-sample
